DARSHAN M

SOC Analyst | Threat Detection & Incident Response | CEH Certified

darshanm8577@gmail.com | +91 9686638577 | GitHub: Darshanm8577 | Bangalore, India

PROFESSIONAL SUMMARY

Entry-level SOC Analyst with hands-on experience in SIEM monitoring, log analysis, and threat detection using Splunk, Wireshark, and Nmap. Certified Ethical Hacker (CEH) – EC-Council (2026). Proficient in mapping alerts to the MITRE ATT&CK framework, detecting Living off the Land (LotL) attacks, analyzing the Cyber Kill Chain, and applying the NIST Incident Response Lifecycle for alert triage and escalation. Strong foundation in TCP/IP, OSI Model, network packet analysis, and endpoint threat investigation. Eager to contribute to a 24/7 Security Operations Center environment at River.

CERTIFICATIONS

★ **Certified Ethical Hacker (CEH)** — EC-Council (2026)

OSCP (Offensive Security Certified Professional) – In Progress (Anticipated 2026)

AWS Academy Cloud Foundations (2025) | Introduction to Cloud Computing – IBM Developer Skills Network

Application Developer (Web & Mobile) – Skill India

TECHNICAL SKILLS

SIEM & SOC: Splunk (dashboards, queries, correlation), alert triage, event correlation, brute-force detection, log analysis, incident investigation

Threat Detection & Response: Indicators of Attack (IOAs), Indicators of Compromise (IOCs), MITRE ATT&CK framework, Cyber Kill Chain, NIST IR Lifecycle (Detection & Analysis), LotL / fileless malware detection

EDR / Endpoint Security: CrowdStrike Falcon concepts, Process Execution Trees, parent/child process analysis, EDR vs. legacy antivirus distinctions

Network Analysis: Wireshark (packet capture, HTTP/DNS analysis, SYN flood/port scan detection), Nmap, TCP 3-Way Handshake, OSI Model, TCP/IP, TCP flags, DMZ concepts, stateful vs. stateless firewalls

Cybersecurity Tools: Metasploit, Burp Suite, OWASP ZAP, Nessus

Vulnerability Management: CVE cross-referencing, OWASP Top 10 (SQLi, XSS, CSRF, Auth Bypass), vulnerability assessment, CEH methodology

Cryptography Fundamentals: Symmetric/Asymmetric encryption, Hashing (SHA/MD5), PKI basics

Operating Systems: Kali Linux, Parrot OS, Windows (authentication log analysis), Windows Server/Client

Programming: Python (scripting/automation), Bash scripting, C, C++

Platforms: TryHackMe (SOC Level 1), HackTheBox – enumeration, privilege escalation, post-exploitation

CYBERSECURITY PROJECTS

Splunk SIEM – Brute Force Attack Detection | Personal Lab *2026*

- Built a SIEM monitoring lab using Splunk to simulate real-world SOC analyst workflows for alert triage and investigation.
- Simulated brute-force login attacks; authored Splunk SPL queries to detect multiple failed login attempts from suspicious IPs — mirroring NIST Detection & Analysis phase.
- Developed real-time dashboards and automated alerts for continuous security monitoring, consistent with CrowdStrike Falcon console workflows.
- Correlated authentication events across log sources to surface anomalous behavior — applying IOA-based detection rather than signature-only matching.

Log Analysis & Threat Detection Lab | Personal Lab *2026*

- Collected and analyzed Windows authentication logs to identify suspicious login patterns and potential brute-force activity.
- Applied structured SOC analyst workflows: alert classification, investigation, escalation documentation — aligned with NIST IR Lifecycle.
- Documented findings in the 'Who, What, When, and How' format required for senior analyst escalation.

Network Traffic Analysis – Wireshark | Personal Lab *2026*

- Captured and dissected network packets to identify abnormal traffic patterns including HTTP anomalies, DNS exfiltration indicators, and suspicious C2-style communications.
- Analyzed TCP 3-Way Handshake behavior, TCP flags, and packet headers to detect SYN floods and port scanning activity.
- Applied CCNA-level TCP/IP and OSI Model knowledge to correlate endpoint alerts with network-layer evidence.

Vulnerable Machine Exploitation (TryHackMe SOC Level 1 / HackTheBox) | Lab Environment *2026*

- Completed SOC Level 1 labs covering log analysis, incident investigation, network security monitoring, and threat detection.
- Performed enumeration, privilege escalation, and post-exploitation, gaining attacker-perspective insights essential for blue team detection logic.
- Mapped attack techniques to the MITRE ATT&CK framework and Cyber Kill Chain; documented remediation strategies.

Web Application Security Testing Lab | Personal Lab *2026*

- Identified and exploited SQLi, XSS, CSRF, and authentication bypass vulnerabilities (OWASP Top 10) using Burp Suite and OWASP ZAP.
- Cross-referenced findings with CVE databases to understand real-world attacker exploitation paths — directly applicable to CVE/Spotlight triage tasks.

EDUCATION

B.E. Electronics & Communication Engineering | Jyothy Institute of Technology, VTU *June 2025*

Diploma in Mechanical Engineering | K S Polytechnic, Bangalore *March 2021*

KEY STRENGTHS FOR RIVER SOC

Analytical thinker trained to 'follow the breadcrumbs' during incident investigation • Comfortable with 24/7 rotational shift environments • Clear, concise incident reporting documentation • Attacker mindset (CEH + offensive labs) applied to defensive detection • Proactive learner — OSCP in progress
